About Our Company

We have been operating international trade of wholesale agricultural products in Bulgaria for many years. With the help of this experience and the support of our group companies in Turkey, Russia, Ukraine, Kazakhstan and Kyrgyzstan, We will be new part of this collaboration as a Agrotrakia OOD. We supply every products that in our list and perform cleaning, screening, peeling and packaging services for our customers. We provide all these services and products in our own modern facilities according to the standards and quality in the world.

Our New Production Line

Before a harvest season of coriander, we installed new high-tech machines for cleaning ashes, sortexing coloured and separating broken ones. We can reach minumum foreign matter and splits percentage without breaking it. Also we have possibility for packaging 5 kg to 500 kg with stitiched information to bags.

World Market

In 2020, world coriander exports exceeded 196 million dollars, previous year it was $161 million and has always risen except for 2017. India, the world's largest producer, about 75% of coriander grows in here. It is not only a producer, but also the largest exporter with 45 million dollars, one-third of the entire market.

Usage Areas: The food trade is the biggest user of coriander as it makes up at least 30% of all curry powders.It is also used by the majority of all Gins around the world as the second most important botanical. It is also used in the food and health sector.

Agricultural Production: Coriander is usually planted in the spring and harvested later that summer when the plant and therefore the seed has dried out. The plant can stand approximately one meter tall and is harvested using a modern combine harvester. After harvesting, coriander needs to be extensively processed and cleaned which can result in losses of 30-40%

Features of Bulgarian Coriander

Bulgaria is the largest coriander seed producer in the European Union, producing the microcarpum variety. Bulgarian coriander seeds are known for their high essential oil content, so significant volumes are used to produce essential oils.

High Oil Rate

Bulgaria is the world's number one producer of rose oil and the same goes for coriander.

Unique Scent

Bulgarian Coriander seeds are well known with nice scent.

Flavour

Commonly stronger, more citrusy than in Asian countries, so sometimes better for specific recipe formulations.

Increasing Demand

Bulgaria became the second largest exporter of coriander in the world last year and every year it grows.

High-tech Machines

With our new production line, we can reach the best quality with maximum purity and minumum brokens.

Professional Team

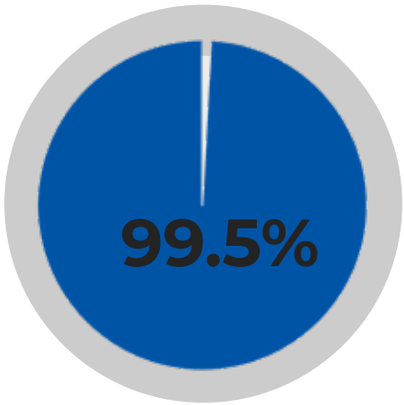

With the help of the professional team, quality will be ensured by continuous control and surveillance.

Over the last five years, Bulgarian exports fluctuated slightly, reaching 20 thousand tonnes in 2019, worth €14 million. In 2019, Indonesia was the main export market for Bulgarian coriander seeds with a 49% export shareBulgarian coriander seed exports are mostly focused on countries outside the European Union. Exports to Europe accounted for only 6.5% of Bulgaria’s total coriander seed exports.

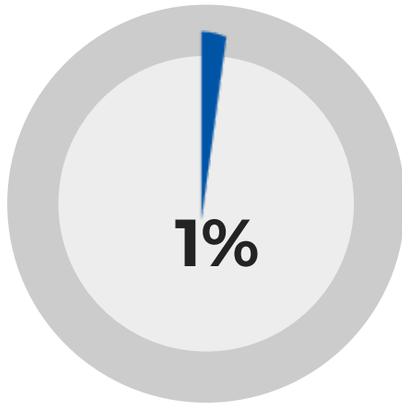

Specification of Our Coriander

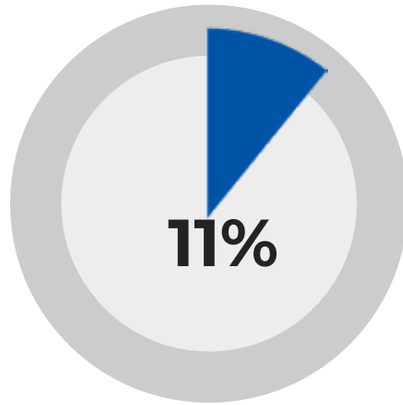

Our coriander is 100% bulgarian origin and has at least 3-4 years shelf life. : Sortexed, cleaned and calibrated in special production line with modern machines. Sound, free from alive and dead insects, free from chemicals and abnormal moisture. Stored in our depot that is cool, dry, odorless and away from sun light.

Purity: After cleaning of foreign matters and dust, we reach minumum this percentage.

Splits: Our maximum broken percentage.

Moisture: Our maximum humudity percentage.

Package Types

We have 3 types of packaging systems one of them PP bags which can be loaded 10 kg to 50 kg. Second one is big bags which can be loaded 500 kg. The last one is in bulk, we can load directly truck or container.
